

GP® SEALANT

GP® SEALANT is a novel low modulus expansion joint sealant and adhesive, especially formulated to ensure bubble free cure event at very high temperature and humidity climatic conditions. The product displays excellent thixotropy allowing its use even in very large voids.

Weight	1.45 gr/cm ³
Cure Rate	2.0 - 3.0 mm/day
Adhesion to Concrete	> 20 kg/cm ² > 2 N/mm ²
CE Certified	EN 15651-1

TITANTECH®

For developers of brownfield and contaminated sites the TITANTECH® family of products represent a major step forward in safeguarding projects against gaseous and chemical contamination.

It cures by reaction with atmospheric humidity to produce a joint sealant with a 50% joint movement accommodation factor and excellent adhesion on substrates traditionally problematic for PU Sealants, e.g. glass, aluminium, steel, polycarbonate, etc. The extrusion rate and tooling of the sealant remain the same throughout a very wide range of temperature and humidity conditions.

GP® SEALANT is CE certified according to EN 15651-1, and specifically designed for sealing GP® Membranes reinforcement bar (RE-BAR) penetrations, and complex detailing areas such as fillet, tight corner transitions, terminations to concrete panels, facades, metal frames glass and granite materials. GP® SEALANT exhibits excellent chemical resistance and provides a gas/air tight seal when used in accordance with the instructions provided.

Application

Slide the sealant into the applicator gun, cut off the very end of the sealant packaging and fit gun with the nozzle that has been cut to deliver the right bead size (min 5 mm). Extrude the sealant into the joint, or around the RE-BAR penetration ensuring that no air is trapped in the joint. Tooling is recommended immediately after the application of sealant. The ratio width to depth should be 2:1 subject to a minimum depth of 10 mm.

Packaging

600CC sausage, 15 sausages per box - applicator gun provided.
12 month shelf life. Use once opened.
